

Pooled: short-trace-final, long-trace-final, inside-loop-state, post-loop-state
Accuracy versus Omega_hat_StateSize

What it tracks: The greatest number of runtime value cells reachable from live program variables at one observation point.

Prediction accuracy

$\Omega_{\text{hat_StateSize}}$ (runtime value cells) · log1p spacing, ticks show original values

-- overall accuracy ■ binned accuracy + Wilson 95% CI ● prediction outcome
